1.一種穿透式套筒及其棘輪扳手,其包

一扳手本體,其具有頭部及柄部, 其頭部係設有一般向實穿扳手頭部 之匣端:

一棘動件・其具有第一端及第二 端,該棘動件之中央係軸向設有質 穿棘動件之結合孔,且於結合孔之 內周綠道處係設有數個卡固槽,而 該卡局槽之側邊係為平面・其第一 端係凸實於扳手頭部之匣端外,其 第二端係可置入扳手本體之厘端內 並可與匣闖產生相對之轉動關係: 一套筒,其係具有第一端及第二 端,其第一端之外周緣適處係設有 數個對應於上述卡固槽之卡固塊, 俾使套簡得以可拆卸之方式結合於

棘動件,而該卡固塊之側邊係為平 面,其第一端之中央係軸向設有一 實穿套筒之通孔,其第二端之中央 2

係軸向設有一套孔,該套孔係可供 極幅幸買。

- 2.一種穿透式套筒及其棘輪扳手,其包 括有:
- 一扳手本**體**,其具有頭部及柄部, 其頭部係設有一級向買穿扳手頭部 之匣端:
- 一輔動件,其具有第一端及第二 端,該棘動件之中央係軸向設有質 10. 穿棘動件之結合孔,且於結合孔之 內周縁適處係設有數個卡固槽,其 第一端係凸露於扳手頭部之匣端 外・該第一端之周縁適慮係設有至 少一切槽,該切槽係與結合孔相運 通,其第二端係可置入扳手本體之 15. 匣端內並可與匣端產生相對之轉動 關係;
 - 一套简,其係具有第一端及第二 端,其第一端之外周緣適處係設有 数個對應於上述卡固槽之卡固塊・

3

其第一端之中央係軸向設有一貫穿 **套筒之通孔,其第二端之中央係軸** 向設有一套孔、該套孔係可供螺帽 套置:

一夾扣體,該夾扣體係具有彈性。 其至少一夾腳係星平直狀,該至少 一夾腳係夾扣於棘動件第一端之切 槽・而凸露於結合孔内。

- 3.如申請專利範圍第1或2項所述之穿 透式套筒及其棘輪扳手,其中卡問 槽與卡固塊之兩側邊所延伸之夾角 係小於九十度者·
- 4.如申請專利範圍第1或2項所述之穿 透式套筒及其棘輪扳手,其中卡固 **槽與卡固塊之兩側邊所延伸之夾角** 係為平行無交集者。
- 5.如申請專利範圍第1或2項所並之穿 透式套筒及其蘇輪扳手,其中棘動 件之第二端之壁面上係環設有賴 部,且於幽部之一端係環設有一凹 槽。
- 6如申請專利範圍第1或2項所述之穿 透式套筒及其棘輪扳手,其中將棘 動件之結合孔與卡固槽間設為圓 角,且套筒之第一端與卡固塊間設 25. 例組合結構剖視圖。 為圓角者。

PENETRATIVE SOCKET AND RATCHET WRENCH SET

Abstract:

A penetrative socket and ratchet wrench set is disclosed to include a wrench body, a ratchet member, a clamp, a socket, and a locking member, wherein the ratchet member has a second end engaged into the box end of the wrench body; the locking member is engaged into a groove at the second end of the ratchet member and a groove in the box end to lock the ratchet member to the wrench body; the socket has a first end inserted into a coupling hole at the ratchet member; the clamp is fastened to a cut groove in the ratchet member and clamped with the two clamping arms clamped on grooves at a locating block of the socket to secure the socket to the ratchet member; the ratchet member has a retaining groove forced into engagement with the locating block to increase the contact area between the socket and the ratchet member and to further provide a big torque during leftward or rightward rotation; the ratchet member has a first end extending out of the box end of the wrench body and fast3ened to the a cut groove at the ratchet member by a springy clamp to detachably secure the socket to the coupling hole of the ratchet member so as to relatively increase the thickness of the second end of the ratchet member and to provide a relatively greater torque without

increasing the area of the head of the wrench body; the concave convex engagement between the retaining groove and the locating block eliminates idle rotating angle and reduces the size required for the head so that operation can positively and quickly be achieved. The invention is indeed a design that has a high industrial value.
